Certifications

Automate your work
Certificate of Participation in Tata Imagination Challenge 2024: Student Track of Tata Imagination Challenge 2024
Accenture UK - Developer and Technology Job Simulation
Saviynt Identity Security for AI Age
Certificate of Participation in Weekly Coding Challenge 2 of Weekly Coding Challenge

Raj Kamal Neerati

"MCA Graduate | Aspiring AI & Automation Developer | Open to Work in IT Roles | Building Intelligent Systems that Simplify Workflows & Empower Businesses"

Hyderabad, Telangana, India

Summary

I'm an MCA Graduate from Anurag University with a strong passion for building AI-driven and full stack solutions that automate workflows and create business impact.

My journey started with curiosity — "Can AI think like me if I teach it right?" — and turned into a mission to develop smart systems that connect people, data, and decisions seamlessly.

I work across technologies like Python, AI/ML, React, Node.js, Automation, and Prompt Engineering, designing intelligent tools that solve real-world challenges — from automating daily business tasks to optimizing digital experiences.

I'm currently open to both job opportunities and business collaborations, where I can apply innovation, automation, and problem-solving to drive growth and efficiency.

Let's connect if you're looking for someone who blends AI intelligence with full stack innovation to turn ideas into scalable impact.

My journey didn't start with corporate experience — it started with a question:

> "Can AI think like me if I teach it right?"

Since then, I've been experimenting with tools like ChatGPT, Gemini, Make, and n8n — building small AI agents that:

Automate job search workflows

Parse and optimize resumes

Design reasoning-based task flows

Learn from prompts and user feedback

Through every project, I've learned something deeper:
AI isn't about replacing people —
it's about teaching systems how to understand human intent.

I believe the future of tech belongs to people who can design
intelligence, not just write syntax.
That's why I focus on:

AI Workflow Automation

Prompt Engineering & Reasoning Design

No-Code AI Systems for Real-World Challenges

I'm open to AI-first, automation, and prompt engineering roles where
I can learn, build, and create impact with innovative teams.

Let's connect if you're building tools, products, or ideas that use AI to
solve real-world problems.
